

TABLE OF CONTENTS

SUMMARY OF KEY FINDINGS	15
PART I: THEORETICAL FOUNDATIONS FOR THE PROJECT	23
1. Research background	23
1.1. Theoretical concepts underpinning the humanization of medicine	23
1.2. Theoretical models of the doctor–patient relationship in healthcare	27
2. The medical staff–patient relationship	28
2.1. Transformations of the doctor–patient relationship	28
2.2. Importance of interpersonal relationships in healthcare institutions	29
3. Clinical communication	32
3.1. Communication in clinical practice	32
3.2. Importance of communication in clinical trials	36
4. Patients’ rights	40
5. The COVID-19 pandemic from healthcare workers’ perspective	42
5.1. Mental wellbeing of healthcare workers	44
5.2. Professional burnout	46
5.3. Social relations	48
5.4. Lifestyle elements	51
5.5. Specifics of working in a pandemic	54
6. The COVID-19 pandemic from patients’ perspective	56
6.1. Mental health and physical health	57
6.2. Working life during the pandemic period	60
6.3. Social relations during the pandemic period	61
6.4. Mode of providing medical services	62
6.5. Patients’ avoidance of visits to Healthcare Facilities	63
7. Protective factors in the COVID-19 pandemic	65

PART II: METHODOLOGICAL ASSUMPTIONS OF THE PROJECT	69
1. Project objective	69
2 Project schedule	70
3 Project methodology and study participants	71
3.1. Pilot study: Qualitative Interviews	72
3.2. Pilot study: Pilot Survey at Healthcare Facilities	73
3.3. Main study: Survey at Healthcare Facilities	74
3.4. Main study: Patient Population Survey	77
3.5. Main study: Survey of Clinical Trial Patients	78
4. Research tools used in the project	78
5. Method of presenting results	83
 PART III: FINDINGS OF THE PROJECT	 89
1. Humanization of medicine as perceived by patients and staff at healthcare facilities	89
1.1. Background of the analysis	89
1.2. Research tools and method of presenting results	90
1.3. Results	92
1.3.1. The perspective of healthcare workers	92
1.3.2. The perspective of patients of healthcare facilities	101
1.4. Summary, practical implications, and directions for further research	114
2. The COVID-19 pandemic from the perspective of healthcare workers ...	118
2.1. Background of the analysis	118
2.2. Research tools and method of presenting results	119
2.3. Results	121
2.3.1. Working during the COVID-19 pandemic	121
2.3.2. Mental health risks	124
2.4. Summary, practical implications, and directions for further research	126
3. The COVID-19 pandemic, the treatment process, and the approach to healthcare from patients' perspective	128
3.1. Background of the analysis	128
3.2. Research tools and method of presenting results	130
3.3. Results	131
3.3.1. Location, reasons and other circumstances of treatment	131
3.3.2. Work-related infection risks	133
3.3.3. Impact of the pandemic on the treatment process and diagnosis ...	134
3.3.4. Delays in access to medical care	135
3.3.5. Consciously avoiding contact with healthcare facilities	137

3.3.7. Mental response to the epidemiological situation	138
3.3.8. Changes in outlook on different spheres of life	139
3.3.9. Socio-demographic determinants of some pandemic impact indicators	140
3.4. Summary, practical implications, and directions for further research	143
4. The health status of healthcare workers and patients	145
4.1. Background of the analysis	145
4.2. Research tools and method of presenting results	146
4.2.1. Physical health indicators	146
4.2.2. Mental and social health indicators	147
4.3. Results	150
4.3.1. Physical health	150
4.3.2. Psychosocial health	153
4.3.3. Social support vs. stress levels	159
4.4. Summary, practical implications, and directions for further research	160
5. Selected health consequences of living in the COVID-19 pandemic linked to behavioral factors	162
5.1. Background of the analysis	162
5.2. Research tools and method of presenting results	163
5.3. Results	166
5.3.1. Use of stimulants and selected drugs by healthcare workers	166
5.3.2. Weight changes according to patients in a population-based sample	169
5.4. Summary, practical implications, and directions for further research	171
6 Patients' rights	174
6.1. Background of the analysis	174
6.2. Research tools and method of presenting results	177
6.3. Results	178
6.3.1. Knowledge and perception of compliance with patients' rights ...	178
6.3.2. Perceptions of patients' rights, broken down by demographic and social characteristics	180
6.3.3. Perception of compliance with patients' rights vs. level of trust in healthcare professionals	187
6.4. Summary, practical implications, and directions for further research	190
7. Public perception of clinical trials (according to patients in the population-based sample)	192
7.1. Background of the analysis	192
7.2. Research tools and method of presenting results	193
7.3. Results	194
7.3.1. Willingness to participate in future clinical trials	194

7.3.2. Factors that may influence the decision to participate in clinical trials	195
7.3.3. Interest in participating in clinical trials in the future, broken down by selected characteristics of respondents	198
7.4. Summary, practical implications, and directions for further research	204
